Carriage Operated without Cam  
in Gear Wheel  
Roller Separating Mechanism  
Adjustable Roller Bearers  
Depressible Grippers

Rockstroh & Schneider, Nachf. A. G.  
Dresden, Heidenau

## "UNDOUBTEDLY THE BEST"

For once we feel that there has been no exaggeration. You have actually delivered the goods. We are doing our best color work on them (two machines) and are entirely satisfied with the results. — THE MATTHEWS-NORTHRUP WORKS, Buffalo.

. . . A machine of such exceptional and such sterling worth . . . remarkable distribution of ink, by which we are enabled to produce work at one rolling that has hitherto required expensive cylinder presses or double and even treble rollings by the best available platens. — EDWARD STERN & CO., Inc., Philadelphia.

We are as you know very particular about our work and have not hesitated to use a double roll in order to get good results. With the Victoria this is not only unnecessary, but owing to the unusual distribution of color we get better results with the one roll than has heretofore been possible to get with two. Our half-tone work, especially vignettes, has heretofore been confined to cylinder presses, but the Victoria prints a vignette half-tone equally well. You are welcome to refer to us in substantiation of this unsolicited testimony. — CHASMAR-WINCHELL PRESS, New York.

We are turning out work on this press which would be impossible to print satisfactorily on any other presses in our establishment. — QUADRI-COLOR COMPANY, New York.

We feel free to say frankly that it seems an indispensable machine in a plant pretending to be modern and profitable. The limit and power of its claimed possibilities have been tested by jobs here. If any interested parties ask you hard questions about the work of the Victoria and your native modesty forbids speaking out all that you may know is fair to the press, please feel at liberty to refer them to us. — CORDAY & GROSS, Cleveland.

. . . Giving such satisfaction that we wish our second to come on as soon as we can make the necessary room. . . Equals any two of our other presses, in fact it gives just as satisfactory work as a cylinder press. — ZABEL BROS., New York.

The double inking is just what that name implies. . . Comparatively cheap at double the price charged for any other machine of the Universal type. — H. K. MULFORD CO., Philadelphia.

The Victoria in this shop for the past two and one-half years has fulfilled all claims made by the manufacturers. It is a remarkable machine. If you happen to run across any "doubting Thomases" send them to us. — ROBERT L. STILLSON CO., New York.
